

Carbon Footprint Report

Rustic by Rebecca

Reporting Period: April 2025 – March 2026

Our commitment is to understand and reduce the environmental impact of our work. As a home-based wedding and events styling business, we aim to operate responsibly while delivering bespoke, beautifully crafted experiences.

Emissions Source	Scope	Estimated Emissions
Business Vehicle (Diesel Van)	Scope 1	~3.2 tonnes CO2e
Home Electricity (Business Use)	Scope 2	Low (estimated share)
Materials, Packaging & Deliveries	Scope 3	~2.3 tonnes CO2e
Total	-	~5.5 tonnes CO2e

Scope 1 – Direct Emissions

Our primary emissions source is a diesel van used exclusively for business travel, covering approximately 9,000 miles per year. This supports transport of materials and travel to event locations.

Scope 2 – Energy Use

As a home-based business, energy use is part of household consumption. A proportion of electricity is attributed to business activities such as planning, design, and preparation.

Scope 3 – Value Chain Emissions

These include purchased materials, packaging, and delivery services required to support client work. These form a significant portion of total emissions.

We are committed to continually improving our environmental impact through better planning, sustainable sourcing, and exploring lower-emission alternatives.
